

Password reset & account recovery

A verified guide for customers and support specialists

Reset a known account password

1. Open the Lumina sign-in page and select **Forgot password?**.
2. Enter the verified account email address.
3. Open the newest reset email and use its link within 30 minutes.
4. Choose a password of at least 12 characters that has not been used on the account.
5. Sign in again. All other active sessions are revoked after the password changes.

If the email does not arrive

Wait up to five minutes, then inspect spam and corporate quarantine. Allowlist **notifications@lumina.example**. Request one new link and use only the newest message because each new request invalidates earlier links. Confirm that the address belongs to an active Lumina account, but do not reveal whether an unknown address is registered.

Account lock and multi-factor authentication

Five failed sign-in attempts trigger a 15-minute temporary lock. A password reset does not remove multi-factor authentication. Support agents cannot disable MFA or accept one-time codes in chat. Loss of all enrolled factors requires identity verification and escalation to Account Security.

Support decision guide

Situation	Required action
Expired link	Request one new link and open the latest email.
Temporary lock	Wait 15 minutes; avoid repeated automated attempts.
No MFA device	Escalate for verified account recovery.
Suspected compromise	Reset password, revoke sessions, rotate API keys, review audit logs.

Security boundary

Never ask for a password, reset link, recovery code, or one-time code. Ownership changes, MFA removal, and suspected account takeover must be handled by a human Account Security specialist after verification.
